

### Water Service Inspection Project: Information for Residents

The City of Benton Harbor's water distribution system is 100+ years old. The existing water lines to homes have a wide variety of ages, but many homes built before the 1960s are likely to have some type of lead component in its service line. It is important to remove this presence of lead for the health of the population.

**LEAD SERVICE LINE (LSL):** If any portion of your service line, the underground pipe that delivers water from the water main to your home, is made of lead, then you have a lead service line. The service line continues to the first shutoff valve inside your home, or 18" inside your home, whichever is shortest.

Since City records do not go back 100+ years, the City does not have a clear record of what the water lines are made from for every home. In order to find out, the City will be hiring a contractor to help visually identify the water line material at the curb stop. Nothing will be required from the homeowner for this process.

The contractor will dig a "pothole" at the curb stop location and visually identify the water line material. It is estimated that the City will need to pothole over 1,800 water services over the next several years in order to find out where all lead lines are located.

The City received funding from a grant from the Michigan Department of Environment, Great Lakes and Energy (EGLE) to help pay for some of the potholes needed. This "pothole" project will begin in Fall 2021 and finish by April 1, 2022, so you may see contractors throughout the neighborhoods during that time. In order to comply with EGLE regulations, a random selection of addresses must be physically verified/potholed. This randomized list of addresses follows.

Also during the project, City of Benton Harbor staff will need to visually inspect what the water lines coming into the house are made of. In order to do that, City staff will be reaching out to residents to arrange for a convenient time to look at the interior water service line.

A letter will be mailed to each inspected address to let the resident know if any water line components were found to contain lead.

LIST OF RANDOM POTHOLING ADDRESSES
